Scribe Worksheet

Clone the Navigator · one page per walk

Expert: Walk # Start: Ink: ☐ 1st ☐ 2nd (corrections)

At every step: the Sensor calls the reading. Write **B** in a column if that side is **blocked**, and leave it blank if it is free. Then circle what the Expert did. Forward = step ahead. Left / Right = turn, then step.

Step	Front	Left	Right	Goal dir. (extension)	Action	Notes
1					(F) (L) (R)	
2					(F) (L) (R)	
3					(F) (L) (R)	
4					(F) (L) (R)	
5					(F) (L) (R)	
6					(F) (L) (R)	
7					(F) (L) (R)	
8					(F) (L) (R)	
9					(F) (L) (R)	
10					(F) (L) (R)	
11					(F) (L) (R)	
12					(F) (L) (R)	
13					(F) (L) (R)	
14					(F) (L) (R)	
15					(F) (L) (R)	
16					(F) (L) (R)	
17					(F) (L) (R)	
18					(F) (L) (R)	
19					(F) (L) (R)	
20					(F) (L) (R)	

Each row is one card: what the robot sensed and what the expert did. Keep going until the goal, or write “bump” in Notes if the Expert hits something.

Tally & Policy Sheet

For the policy builders · one sheet for the whole class

1. For every row on every worksheet, find that reading below and put a tally mark (𝍸) in the column for the action taken. Use a second color for corrections.
2. For each reading, circle the column with the most tallies. If it is a tie, pick the most recent row, and tick the **Conflict** box if both columns have any tallies.
3. Write the winning action in **Policy does**. That table is what the Robot will follow.

Front	Left	Right	Forward	Turn left	Turn right	Policy does (□ conflict)
free	free	free				
free	free	blocked				
free	blocked	free				
free	blocked	blocked				
blocked	free	free				
blocked	free	blocked				
blocked	blocked	free				
blocked	blocked	blocked				

If the Robot meets a reading with no tallies

Circle your rule before the run: ◯ just go forward ◯ copy the most similar reading (nearest neighbor: the one that differs in the fewest sensors)

After the run

Run	Steps to goal	Bumps	Outcome (goal / looping / out of time)
Before corrections			
After corrections
